Earth-Rite® II RTR™

Static Earthing for Road Tankers

Earth-Rite II RTR Road Tanker Earthing System

The Earth-Rite II RTR is designed to ground a road tanker during loading and unloading operations in order to dissipate any static electricity which could accumulate on a road tanker during these processes.

CLC/TR 60079-32-1 "Explosive Atmospheres: Electrostatic Hazards - Guidance" highlights road tankers as being capable of accumulating electrostatic charge during product transfer operations.

To mitigate against the accumulation of static on the body of the road tanker, it recommends that trucks be grounded during the transfer procedure.

The Earth-Rite II RTR static grounding system is designed to provide grounding of road tankers to mitigate against static discharges from the main body of the road tanker.

The system consists of a red/green LED ground status indicator and dry contacts that can be interlocked with the process or an additional strobe light.

The Earth-Rite II RTR includes:

- **Flameproof and GRP Enclosures** incorporating Intrinsically Safe Static Ground Monitoring System
- **Ground Connection Junction Box** with Clamp Stowage Point and Quick Release Connector
- **Heavy Duty Stainless Steel Universal Grounding Clamp** with Hytrel® Extendable Cable and Quick Connectors

Earth-Rite® II RTR™

Patented Tri-Mode Technology Explained

MODE 1 AND 2

With the grounding clamp and cable attached to the designated earth point on the road tanker through its patented circuitry the Earth-Rite II RTR detects the presence of the road tanker by its capacitance and not by impedance, resistance or the presence of a diode on the road tanker.

At the same time the patented circuitry ensures that it has a connection to the general mass of the earth. This is a critical step as a connection to earth is the only means by which the static electricity can be transferred from the teeth of the clamp on the road tanker to earth thereby mitigating the accumulation of static electricity during the transfer.

MODE 3

Once Modes 1 and 2 have been completed successfully the patented circuitry monitors the loop resistance from between the teeth of the clamp on the road tanker to the designated general mass of the earth through the Earth-Rite II systems G1 and G2 connections. The circuitry will monitor the loop resistance and if it exceeds 10 Ohms it will stop the transfer.

This 10 Ohms loop monitoring requirement is detailed in the following standard/s and recommendations:

IEC TS 60079-32-1:2017

Clauses 7.3.2.3.3, 7.11.2, 8.8.4, 10.1.2, 10.1.4, 13.2.2, 13.3.1.1, 13.3.1.4, 13.4.1 & G.11.2

NFPA 77:2019 Clause 7.4.1.3.1

API RP 2003 8th Edition Clause 4.2.2

* Always check for and read the latest version of the International Standards, Guidance and/or Recommended Practices.

The repeatability of the 10 Ohm loop monitoring has been Third Party validated by CSA/SIRA

ATTENTION:

Driver / operator training is essential for the correct use of the grounding system. The first action in the material transfer process is grounding of the road tanker. The Earth-Rite II RTR clamp should be connected directly to the designated earthing point of the road tanker. The grounding clamp should NOT be removed until all other procedures in the material transfer process are complete.

All metal components on the road tanker should have an electrical continuity not exceeding 10 Ohms. Isolated metal components should not be present on the road tanker. If isolated metal components are present on the road tanker they could possess a capacitance similar to that of the main road tanker body.

Pulsing LEDs confirm positive ground condition

Volt free interlock contacts

Earth-Rite II system output contacts can be interlocked with process equipment and/or strobes. Interlocking the grounding system with the process equipment can enhance the Standard Operating Procedures (SOP) before the movement of material can take place. Interlocking with strobes provides personnel with a wider field of view that the grounding SOP is underway.

On rare occasions grounding clamps can be removed by operators or lose contact with equipment due to unstable connections being made initially or overstretching of the cable connected to the grounding clamp. The grounding system, can, via the output contacts, halt the process. However, it should be borne in mind that the movement of the product may not stop even though the equipment (pump / impeller) has halted. This could lead to the continued generation of static charge. In such circumstances it is the responsibility of the site operator to ensure their SOPs cater for such scenarios. This assumes the grounding system has been installed in accordance with the Instruction Manual. If you do not have access to an Instruction Manual contact Newson Gale.

Earth-Rite® II RTR™

Technical Specification

Exd (Zone 1 Gas / Vapour Atmosphere - Zone 21 & 22 Dust Atmospheres)

Monitoring Unit

Power Supply	115 V or 230 V AC, 50-60 Hz 12 V or 24 V DC
Power Rating	10 watt
Ambient Temperature Range	-40°C to +55°C
Ingress Protection	IP 66
Weight	4.5 kgs (9.9 lbs) nett
Construction	Copper-free cast aluminium
Monitoring Circuit	Intrinsically safe
Monitoring Loop Resistance	Nominally $\leq 10 \text{ Ohm}$ ($\pm 10\%$)
Output Relay Contact Rating	2 off voltage free change-over switch contacts 250 V AC 5 A 500 VA max resistive 30 V DC 2 A 60 W max resistive
Cable Entries	7 x M20 (2 x plugged)

Junction Box/Stowage Point

Enclosure Material	GRP with carbon loading
Terminals	2 x 2.5 mm ² conductor capacity
Stowage Device	Insulated universal stowage pin
Cable Entries	1 x 20 mm
Clamp Cable Connection	Quick Connect

Grounding Clamp

Clamp Design	2 pole with tungsten carbide teeth
Body	Stainless steel (SS grade: 304)
ATEX / FM / IECEx Certification:	Ex II 1 GD T6 (Assessed to EN 13463-1 : 2009) ATEX certificate number: Sira 02ATEX9381 FM Certificate of Compliance number: 3046346 IECEx Ex h IIC T6 Ga Ex h IIIC T85°C Da Ta = -40°C to +60°C IECEx EXV 20.0033

Spiral Cable

Cable	Blue Cen-Stat Hytrel sheath (Static dissipative, chemical & abrasion resistant)
Conductors	2 x 1.00 mm ² copper
Length	3 m (10 ft), 5 m (16 ft), 10 m (32 ft) or 15 m (50 ft) 2 pole Cen-Stat blue spiral cable with Hytrel coating which has colour, UV protective and static dissipative additives

Simple Apparatus
GRP junction box with nylon grounding clamp stowage pin

Static Grounding Clamp

Dual core stainless steel grounding clamp fitted with one pair of tungsten carbide tips

Earth-Rite® II RTR™

System Options

Installer's Kit

The kits provide installation engineers with the necessary Ex (d) enclosure glands required to complete an **Earth-Rite II RTR** installation as specified in the system installation manual.

Kit A

Ex (d) IP68 glands (x2) for armoured cable 9 mm to 13.5 mm Ø*,
Ex (d) IP68 glands (x3) for non-armoured cable 4 mm to 8.4 mm Ø*,
IP68 plastic gland for junction box cable, 3m of 2 core conductor cable (x1) to connect system enclosure to clamp stowage box, 1m of solid green earth loop cable (x2) with PCB connectors and 10 mm bolt eyelets attached.

Kit B

Ex (d) IP68 glands (x5) for non-armoured cable 4 mm to 8.4 mm Ø*,
IP68 plastic gland for junction box cable, 3m of 2 core conductor cable (x1) to connect system enclosure to clamp stowage box, 1m of solid green earth loop cable (x2) with PCB connectors and 10 mm bolt eyelets attached.

Kit C (GRP/P1)

Ex (e) IP68 glands (x5) for non-armoured cable 6 mm to 13 mm Ø,
IP68 plastic gland for junction box cable, 3m of 2 core conductor cable (x1) to connect system enclosure to clamp stowage box, 1m of solid green earth loop cable (x2) with PCB connectors and 10 mm bolt eyelets attached.

* For areas not requiring IIC apparatus.

Kit A - with Ex d glands, for use with armoured cable

Kit B - with Ex d glands, for use with non-armoured cable

Kit C - with Ex e glands, for use with non-armoured cable

System Options

Earth-Rite II RTR Tester

The **Earth-Rite II RTR Tester** is a capacitance resistance tester (CRT) designed to have the same electrical characteristics as a road tanker and provides engineers with a means of checking that the **Earth-Rite II RTR** undergoing installation is permissive when it detects these characteristics.

The Tester is connected to the **Earth-Rite II RTR** system and it's grounding point, and when activated, the **Earth-Rite II RTR's** LED indicators change from red to green, confirming that the Road Tanker Recognition and Static Ground Verification checks are functioning as intended.

The CRT is highly recommended with a minimum of one per site.

- Required for system commissioning and routine service checks
- Easy to use with simple PASS / FAIL condition

Retractable Cable Reel

The Retractable Cable Reel is supplied for grounding system installations where customers want to ensure the grounding clamp and cable are returned to the static grounding system by operators and drivers on completion of the product transfer process. The reel can be used in conjunction with the **Earth-Rite II RTR**.

- Certified for ATEX Zone 1 and 21 hazardous areas
- Self-retracting with up to 15 m of Hytrel® protected cable
- Silver plated ultra low resistance slip ring contacts
- ATEX - II 2 GD T6

Sun Shield

Designed for operating environments subject to intense sunlight, the ERII Sun Shield protects against direct sunlight hitting the indicators on the **Earth-Rite II RTR** static grounding system.

The Sun Shield casts a shadow over the indicators during peak sun light hours so that operators can easily view the ground status indicators. The shield is constructed from stainless steel and can be fitted to any installation in a matter of minutes.

System Options

Intrinsically Safe (I.S) Switching PCB

The I.S Switching PCB is an additional circuit board added to Newson Gale system enclosures to enable users to directly interface with, and switch intrinsically safe circuits without the need for additional equipment. The I.S Switching PCB is designed not to affect the I.S signals electrical parameters and is compatible with the Earth-Rite II RTR.

- 30 V DC, 500 mA
- $L_i = 0H$, $C_i = 0F$
- Suitable for Ex ia, ib, ic rated intrinsically safe circuits only
- NAMUR Compatible

Ex Strobe Light

The strobe light is mounted in an elevated position and when the equipment is correctly grounded, flashes continuously informing personnel that a transfer process is underway and is protected from the static hazard. The strobe light can be used in conjunction with the Earth-Rite II RTR.

- 115 V / 230 V AC and 24 V DC options
- ATEX / IECEx approved Exd strobe light
- Ex II 2G Ex d IIC T4 (Ta. -50°C to +70°C)
- II 2G Ex d IIC T5 (Ta. -50°C to +40°C)
- II 2D Ex tD A21 IP67 T125°C based on max. Ta. 70°C

EARTH-RITE RTR TANKER TOPRAKLAMA VE İZLEME SİSTEMİ

A- TEKNİK ÖZELLİKLER:

Her bir Cenectrex Earth-Rite RTR Tri Mode Topraklama Sistemi aşağıdaki elemanlardan oluşur:

I) Earth-Rite RTR Exd[ia] Topraklama İzleme Ünitesi, EEx ia korumalı rölesi, LED işaret lambaları (yeşil-kırmızı) ve terminalleri ile birlikte

Sistem Sertifikasyonu: ATEX ExII 2(1)GD
Exd[ia]IIC T6 Gb(Ga)
SIL2

Gövde: Alaşım döküm (bakır içermeyen), IP66

Çıkış Rölesi: Devre direnci 10 ohm'un altındaysa aktif olur, üzerindeyse devre dışı kalır.

Kontak: 2 gerilimsiz CO kontak 250VAC, 5A, 500VA max. resistif

İşaretler: Kırmızı & Yeşil LED'ler (Toprak Kesik & Toprak Sağlıklı)

Pano Girişleri: M20 dişli (7 ad.)

Besleme Gerilimi: 220/240 AC, 50 Hz

II) a) Çift Devreli Paslanmaz Çelik Topraklama Pensesi

Pense Sertifikasyonu: ATEX Ex II 1 GD T6

Pense Dizaynı: Paslanmaz Çelik

b) Spiral Kablo: Kimyasallara, aşınmaya ve UV ışınlarına karşı yüksek dayanıklılıkta spiral kablo (2 damarlı 1.0mm²), mavi.

Uzama Oranı: 1:10 (Toplanmış durumda 1m., açıldığında 10m'ye kadar uzamaktadır).

II) Bağlantı Kutusu:

Gövde: Cam elyafı destekli polyester,

Terminaller: 2x2,5mm²

Pense Tutma Pini: Yalıtılmış 20 mm çaplı pin

Kablo Girişi: 1x20mm

Kablo-Pense Bağlantısı: Kolay bağlantı konnektörü ile

B-İŞLETİM:

1. Dolum veya boşaltım başlamadan topraklama pensesi tankere takılır. Pensenin üzerindeki sivri uçlar iletken yüzeye kolay ulaşılması için özel tasarlanmıştır.
2. Bu sistem, tankerin güvenli topraklanması için 3 özel avantaj getirmektedir:
 - a) Operatörün, topraklama bağlantısını işletim başlamadan önce yapmasını gerektirmektedir.
 - b) Kamyon tanker ile toprak arasında statik elektriğin hızlı ve güvenli boşalacağı iletken hattı kurmaktadır.
 - c) Dolu/Boşaltım sırasında toprak ile tanker arasında kurulan statik elektriğin deşarj edildiği iletken hattın 10 ohm'un altında kalıp kalmadığını izlemektedir.
3. Yeni geliştirilen Tri-Mode tekniği ile aşağıdaki kontrol ve izlemeler yapılmaktadır:
 - a) **Mode 1:** Pensenin bağlandığı tanker kamyonların kapasitif değerini ölçmektedir. Böylelikle pensenin tankere mi yoksa başka bir iletkene mi bağlandığı güvenlik amacı ile kontrol edilir. Sistem tanker dışında herhangi bir iletkene bağlanıp, çalıştırılmaz. Tank ile bağlantısı olmayan, tampon gibi yerlere bağlantı yapılması durumunda da işleme izin vermez.
 - b) **Mode 2:** Tanker ile toprak arasında statik elektriğin hızlı ve güvenli boşalacağı iletken hattın standartlara uygun kurulup, kurulmadığını denetler.
 - c) **Mode 3:** Yukarıdaki iki ölçümün başarı ile yapılması sonucu işletim başlar. Sürekli Devre İzleme özelliği sayesinde, işletim süresince kurulan topraklama hattının 10 ohm'un (IEC 60079 32-1, NFPA 77) üzerine çıkmaması garanti altına alınır.
4. Mode 1 ve Mode 2'deki ölçümlerin başarılı olması sonucu alınan kontak çıkışı değerlendirilerek, pompa, vana, vb. teçhizat kilitlenebilir veya alarm alınabilir.
5. Topraklama İzleme Ünitesi'nin üzerindeki kırmızı ve yeşil LED işaret lambaları ile topraklamanın devamlılığı kolaylıkla izlenir. Uygun olmayan durumda KIRMIZI LED yanar. Topraklama standartlara uygun kurulunca YEŞİL LED'ler yanıp sönmeye başlar. Topraklama hattının kesilmesi durumunda KIRMIZI LED tekrar yanar.
6. İşletim tamamlandığında pense yerinden çıkarılır. Spiral kablo toplanarak, Pense Bağlantı Kutusu üzerindeki özel yerine takılır.

C- NOTLAR:

1.Sistemin tüm elemanları Zone 1 ve Zone 2 tehlikeli bölgelerinde kullanıma uygun olduğu için montaj, tankerlere çok yakın bir alana yapılabilir. Röle çıkışı sahada alınır, böylece besleme kablosu dışında kumanda odasından ayrı bir hat çekilmesine gerek kalmaz.

2. Earth-Rite RTR Sistem Avrupa Topluluğu normlarına ve ATEX yönetmeliklerine uygundur.

Ayrıca IEC 60079 32-1 ve NFPA77 yönergelerinde istenilen şartları sağlamaktadır.

D- OPSYONEL:

1. Kablo Uzunlukları: İhtiyaca göre 5m. veya 15m. olarak ayrıca temin edilebilir.

2. Kablo Tamburu: Otomatik sarımlı kablo tamburu isteğe bağlı olarak temin edilebilir. Kablo uzunluğu 15 metredir.

3. İşaret Lambaları: Daha büyük ex-proof işaret lambaları ayrıca temin edilebilir.

4. Anahtarlı Şalter: Sistem, tanker kamyonların topraklaması dışında başka işletim amacı ile de kullanılacak ise (vagon tanker, IBC, vb.) bu şalter ile işletim şekli değiştirilir.

5. Montaj kiti: sistemin montajı için gereken kablo rakorları ve diğer aksesuarlar Kit A veya Kit B olarak temin edilebilir.

6. IS Anahtarlama PCB'si: Kendinden emniyetli anahtarlama PCB'si isteğe bağlı olarak temin edilebilir.

7. ER II RTR Tester: Sistemin test edilebilmesi için kullanılması tavsiye edilir.

8. 12V/24VDC: Sistemin 12V/24VDC ile çalışan modeli mevcuttur. İstenirse 220V AC yerine temin edilebilir.

Not: Tesisatta kullanılacak kablo ve/veya borular bilinmediği için Topraklama İzleme Ünitesine girişi sağlayacak ex-proof rakorlar ve diğer aksesuarlar temin edilecek pakete dahil değildir.
